

# Chrysanthemum

## Manuring & Fertilization

Chrysanthemum is a heavy feeder and requires large amount of both Nitrogen and Potassium. Nitrogen is required at early stage and the plants need P throughout the growth period. As the buds appear, the proportion of K should be increased and N should be reduced.

Recommend doses for various centers -

Centre	Recommended Dose kg/ha		
	N	P	K
Pune	200	200	200
Ludhiana	400	400	200
Kalyani	400	400	400
