

# Jasmine

## Soil & Climate

### **Soil :**

Jasmine can be grown on a wide range of soils. Well-drained, rich loamy soil with a pH ranging from 6.5-7.5 is ideal for their cultivation.

### **Climate :**

Jasmine prefers mild and tropical climate. Jasmine is commercially grown in India under open field conditions. The ideal requirements for successful cultivation of jasmine are mild winter, warm summer, moderate rainfall and sunny days. Jasmines grow well upto 1200 m. A well-distributed annual rainfall of 800 to 1000 mm is optimum for growth and development.
